

Biomimicry : Nature Did It First!

Summer Enrichment With Mrs. Janss

Solving Problems By Following Nature's Examples

We will experience nature's engineering solutions to our everyday problems and explore our own applications from the world around us.

The kingfisher bird gave us the solution to the noise problem on the Japanese Bullet train. So could a tiny beetle in the desert show us how to better collect water?

This class is open to older 4's through returning Kindergarteners.

Please choose 1, 2, 3 or all 4 days. Monday thru Thursday

The Think Tank will start each day at 9 and wrap up at 3.

Each week we will concentrate on one facet of Planet Earth to appreciate how those living things have adapted and survived and how we can use those unique qualities to make our life better.

Each week will have a new focus so don't worry about missing a week.

Your child needs: a lunch, closed-toe shoes, & a reusable water bottle!

Please apply sunblock and bug spray at home.

And please leave all toys at home.

I am Particularly Excited about this Summer Program! Biomimicry is a fairly new field with huge potential. And even more exciting is that Anyone of Any Age can participate!

Observe! Daydream! Test! Apply! Smile!

Feel Free to Contact Me at Any Time!
